

Bridgit — Pipeline Export: Schema Reference

Field definitions for bridgit_pipeline_export.csv · Use alongside the data export

Field Name	Data Type	Description	Valid Values / Notes
opportunity_id	String	Unique record identifier for each opportunity	Alphanumeric. Should be unique across all rows.
opportunity_name	String	Deal name — typically Company + product/scope	Free text. No enforced format.
account_name	String	Customer company name	Should match exactly for the same company across records.
account_segment	Picklist	Company size / market segment	Enterprise, Mid-Market, SMB
stage	Picklist	Current deal stage in the sales funnel	Prospecting → Qualification → Proposal → Negotiation → Closed Won → Closed Lost
arr	Integer (\$)	Annual recurring revenue value of this deal in USD	Should be > 0 for any real opportunity. \$0 indicates a placeholder not yet scoped.
close_date	Date	Projected or actual close date	Format: YYYY-MM-DD. Should always be set on open deals.
last_activity_date	Date	Date of last logged activity: call, email, or meeting	YYYY-MM-DD. Null where no activity has been logged.
days_since_activity	Integer	Days since last_activity_date, pre-calculated	Null where last_activity_date is null.
owner_name	String	AE who owns the deal	J. Torres, A. Patel, M. Singh in this dataset.

Bridgit — Pipeline Export: Schema Reference

Field definitions for bridgit_pipeline_export.csv · Use alongside the data export

Field Name	Data Type	Description	Valid Values / Notes
probability	Integer (%)	Win probability 0–100	Auto-set by stage by default. Can be manually overridden by rep.
forecast_category	Picklist	Rep's forecast call for the current period	Omitted → Pipeline → Best Case → Commit → Closed
next_step	String	Free text: next action on the deal	Often blank. Blank on a late-stage deal is a risk signal.
num_contacts	Integer	Number of contacts logged on this account	1 contact = single-threaded deal risk.
created_date	Date	Date the opportunity was created in the CRM	YYYY-MM-DD. Must be in the past.
