

Bridgit — AI Technical PM: Live Interview Challenge

60-minute live build session

THE SITUATION

Every Monday morning, Bridgit's Sales leadership wants visibility into pipeline health — where deals stand, what's moved, what's stalled, what needs attention. Right now someone pulls this together manually. It takes time, and it's inconsistent.

THE CHALLENGE

Build something that solves this.

You have a data export of the current pipeline and a schema reference so you understand the data model. You have 40 minutes. What you build, what it outputs, and how it delivers value is entirely up to you — that's part of what we're looking at.

WHAT YOU HAVE

Pipeline Data Export	A CSV export of current open opportunities with account context. See the Pipeline Data tab.
Schema Reference	Field definitions, valid values, and notes for every column. See the Schema Reference tab.
Your tools	Use whatever you'd actually reach for: Claude Code, the API, a notebook, a script — your call.

WHAT TO PRODUCT

Something a Sales leader would actually use on a Monday morning. What form that takes — a Slack message, a document, a digest, a structured output — is your decision. So is what you surface and what you leave out. Be ready to explain your choices.

HOW TO APPROACH IT

This isn't a test of perfection — it's a test of how you work. Think out loud. Make reasonable assumptions and name them. If you hit a wall, show us how you navigate it. We're more interested in your instincts and iteration than a polished result.

TIMING

0 – 5 min	Brief handover + any clarifying questions
5 – 45 min	Live build — screen shared throughout
45 – 55 min	Debrief discussion
55 – 60 min	Your questions for us
